Appendix G: Improvement Progress

1. Improvement Progress Executive Summary

CABQ DMD has made great strides in developing a sustainable workflow related to improving Curb Ramp and Sidewalk assets. GIS is the system of choice for cataloging the condition and physical attributes of the asset as well as capturing its geographical location. This sustainable workflow development is an on-going effort, a work in progress and requires intermittent updates as determined necessary.

1.1 Updated ADA_Ramps GIS Schema

DMD has developed a GIS layer and database schema associated with the asset class of ADA Ramps. To that end, the ADA_Ramps GIS schema has been updated to better reflect sustainable and important physical attributes of the asset.

A committee, made up of GIS Data Editors, IT Professionals, Construction Engineers and Administrators, evaluated the previous Curb Ramp database schema and unanimously decided that a schema update was required to move forward. The new schema will better reflect important query-able attributes including new fields related to other common physical attributes of the curb ramp as well as new attributes related to Ramp Types and Orientation. It also includes integration URL links into other business systems. Additionally new fields were also added to better track changes to the database records. Below is a metadata table reflecting the new ADA_Ramps GIS schema:

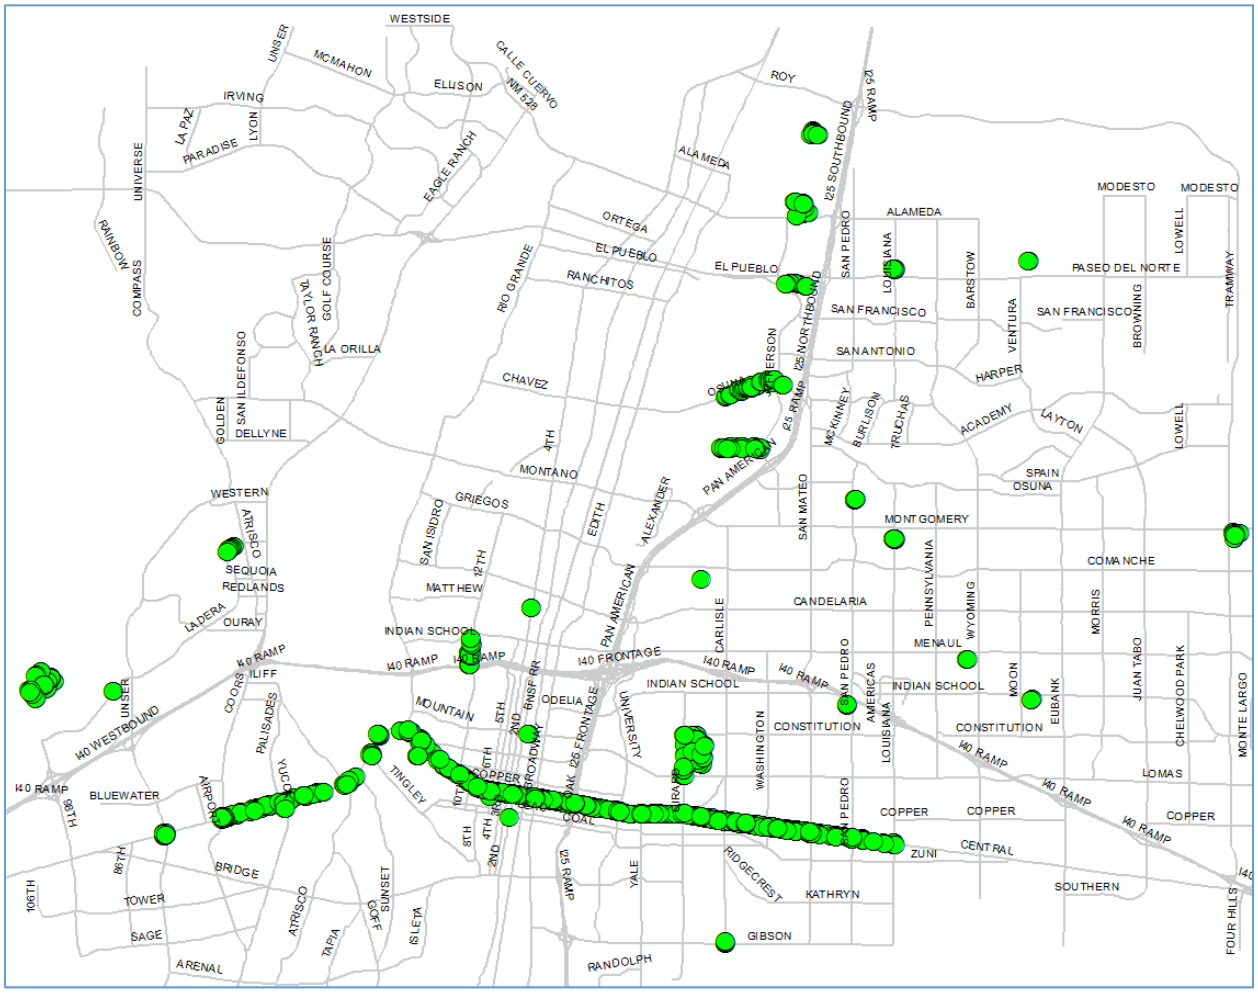
1.2 Improved ADA Ramps

DMD is in contact with many of the stakeholders regardless of bureaucratic organization. To that end, the implementation process is moving forward as new business practices and protocols have been established and information is beginning to flow from the source of project development to the GIS data editors who update the actual GIS records.

According to the current ADA_Ramps GIS dataset, and since Dec. 2017, at least **547** ADA Ramps have been improved since the data was originally collected. The following is a map reflecting the actual assets improved:



1.3 Updated ADA_Sidewalks GIS Schema

Adopting an implementation strategy of "start small and scale big", DMD is strategically starting with ADA_Ramps as it rolls out the implementation process so as to learn from this experience and then apply the lessons learned to developing a similar workflow and formal implementation for ADA Sidewalks.

1.4 Improved ADA Sidewalks

As DMD learns more through the experience of establishing new business procedures discovered while implementing the ADA_Ramps workflow, we expect to roll out a similar formal workflow related to ADA Sidewalks before the end of 2020. Since many of the stakeholders are similar, this should be a smoother transition for all parties involved. Until the formal implementation process for ADA sidewalks begins we are still keeping track of projects containing improved sidewalks and are currently retro-populating the existing Sidewalks GIS layer so that when the new ADA_Sidwalks GIS schema is complete, we will easily be able to update the new schema with current information. As is typically the case, the GIS database will naturally evolve and reflect real-world conditions over time.

As we are still retro-populating the current ADA_Sidewalks GIS dataset, as of the writing of this document, the best information available is:

More than **18,736** linear feet of sidewalk has been improved since the data was originally collected. The following map depicts many (but not all) of the actual assets improved:
