Our Mission

We work to develop **scalable policy solutions** that will empower families throughout the United States to **rise out of poverty** and achieve better life outcomes

We use big data to study how to increase upward mobility

Analyze a broad range of interventions, from childhood to adulthood

Study the roots of the problem locally to develop tailored solutions

OPPORTUNITY
INSIGHTS
How Do We Improve Low Opportunity Neighborhoods?

- The Moving to Opportunity approach has **limits to scalability**

- Ultimately, we need to increase upward mobility **within low-opportunity areas**

- Difficult to identify a "recipe for success" in each area

- As a first step, examine **characteristics of areas** with high levels of upward mobility

OPPORTUNITY INSIGHTS

Two Approaches to Increasing Upward Mobility in Neighborhoods

- **Reducing Segregation**: Increase Access to High-Opportunity Areas by Providing Affordable Housing

- **Place-Based Investments**: Invest in Low-Opportunity Neighborhoods to Increase Upward Mobility

OPPORTUNITY INSIGHTS

National Characteristics of Higher Opportunity Neighborhoods

More Stable Family Structure

Lower Neighborhood Poverty Rate

Better School Quality

Greater Social Capital

These four **neighborhood variables** are among the strongest correlates **related to upward mobility** in the country. They are not necessarily causal factors, but they do give us a sense of what higher mobility neighborhoods tend to look like.

- Nationally, there are a few schools that stand out as high mobility rate institutions that propel an especially large number of students from the bottom to the top of the income distribution

OPPORTUNITY INSIGHTS

Mobility Rates – A Product of College Success and College Access
Measuring the Economic Mobility of Colleges

A college's *mobility rate* is the fraction of its students who come from bottom fifth **and** end up in top fifth, this can be broken down into two key components:

Access rate – fraction of students who come from the bottom fifth ($25,000 and below in household income)

Success rate – fraction of students from the bottom fifth who make it to the top fifth ($58,000 and above in individual income)

Mobility Rate = Access x Success

2%   =   13. 6% x   15%

Collegiate Leaders in Increasing Mobility

CLIMB is a **partnership** between Opportunity Insights and **400 colleges** across the U.S. that seeks to help colleges improve the economic mobility of their students by:

- Increasing access to low-income students to college

- Ensuring the success of students from disadvantaged backgrounds at college

The CLIMB Network's Current Members
CLIMB Currently Includes 422 Colleges That Collectively Serve More Than 5.2 million students

State system participating

Appendix
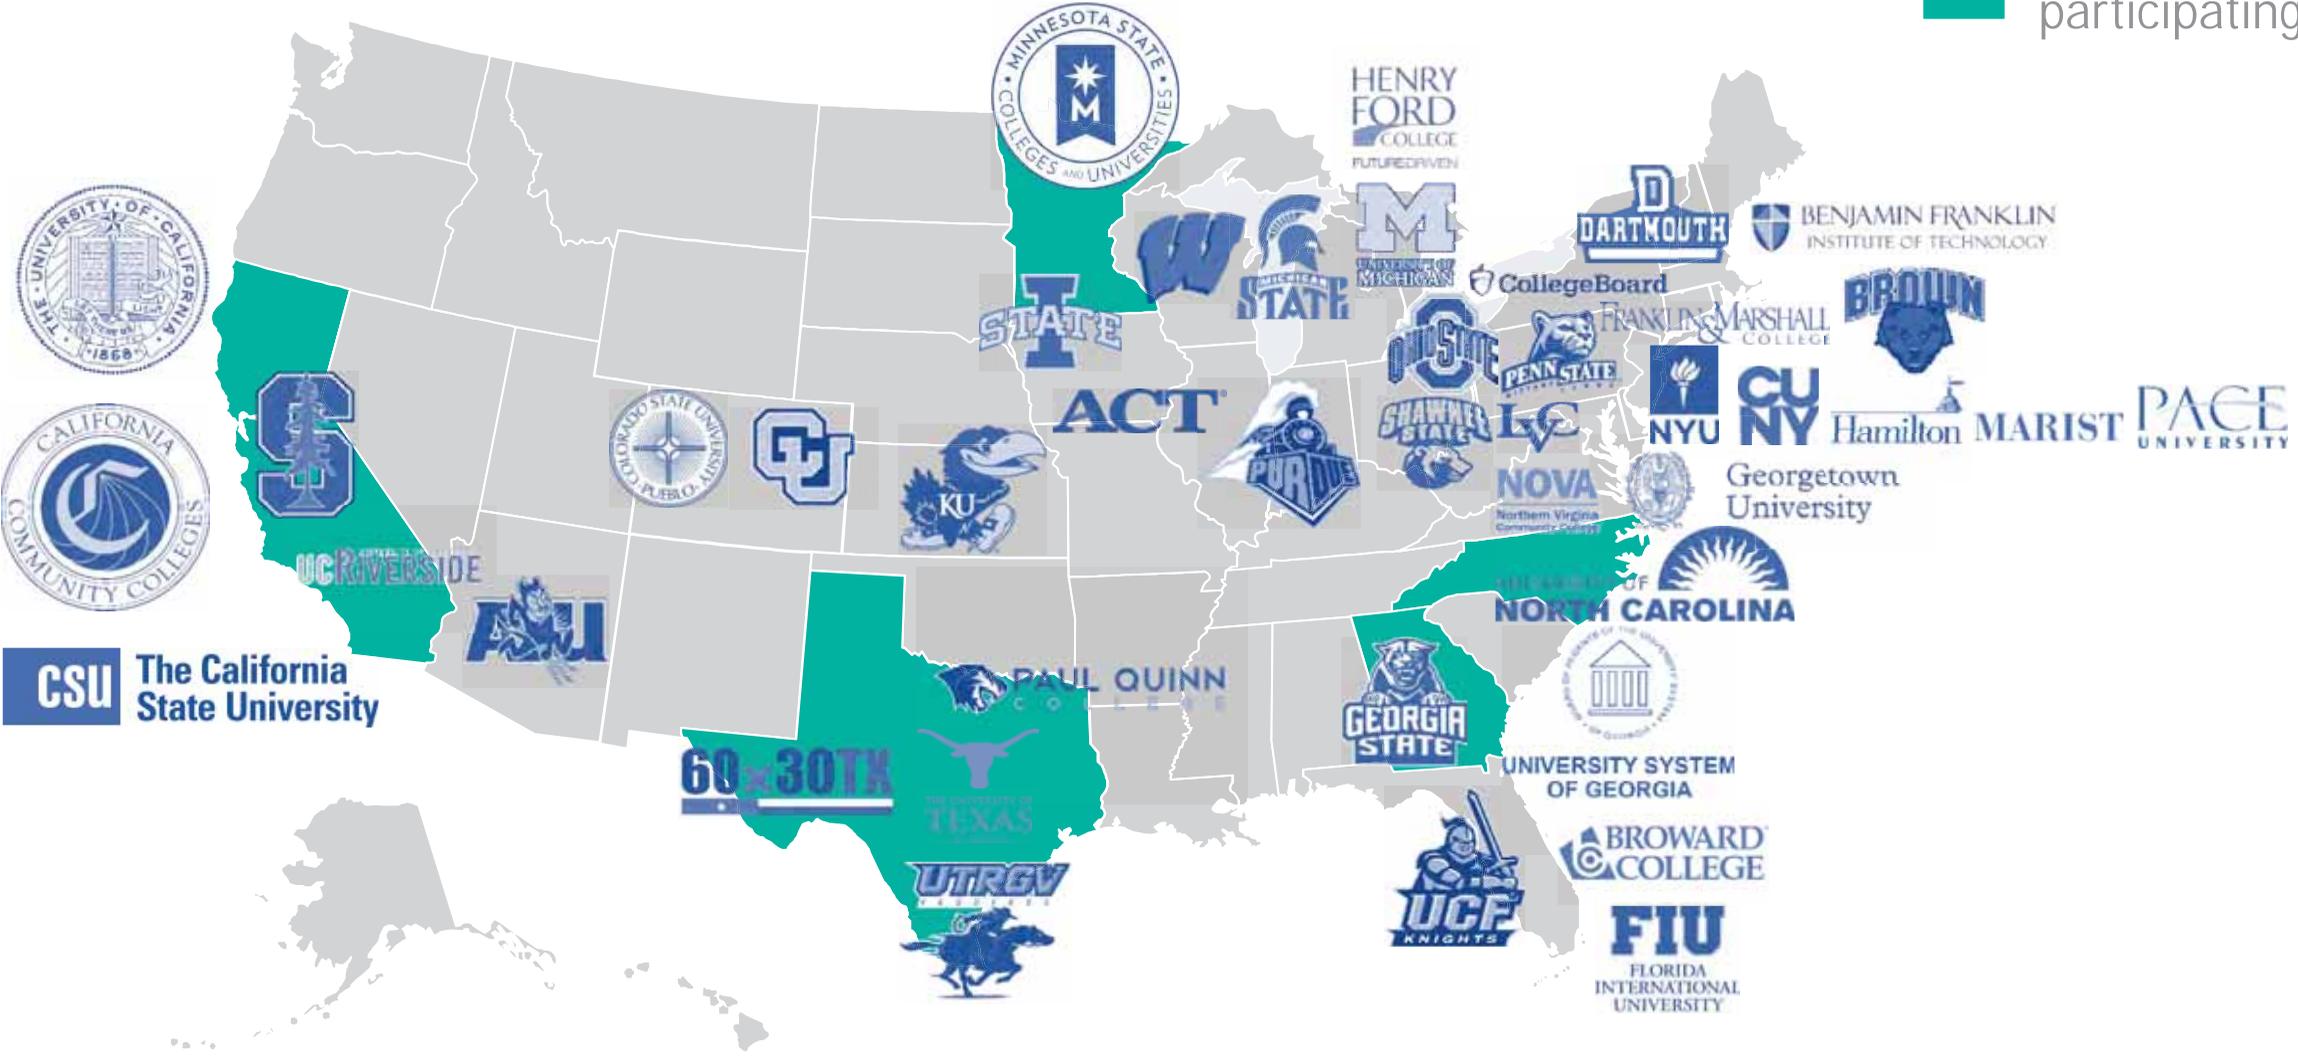

Geographies of Analysis
## Example: Albuquerque

Albuquerque

Metropolitan Service Area (MSA)

- MSAs have high population density at their center and close economic ties throughout the area

- Defined by the U.S. Office of Management and Budget

Commuting Zone (CZ)

- CZs combine counties to more closely reflect the ties between employers and labor supply.

- Defined by the U.S. Department of Agriculture
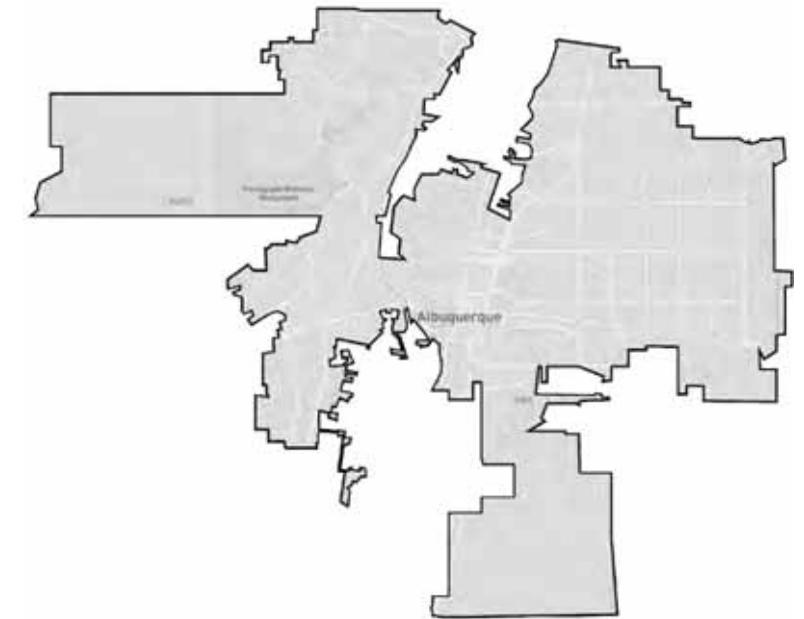

City Boundary

- City limits are typically determined by ordinance, state charter, or statute.

OPPORTUNITY INSIGHTS

Scaling on the Atlas

"National" Scaling

"Subgroup" Scaling

"National" scaling refers to the "Everyone" scaling on the Atlas which scales the colors to compare the outcomes of the selected subgroup **to those of all children nationwide**, (e.g., comparing low-income children to all other children no matter what race or income).
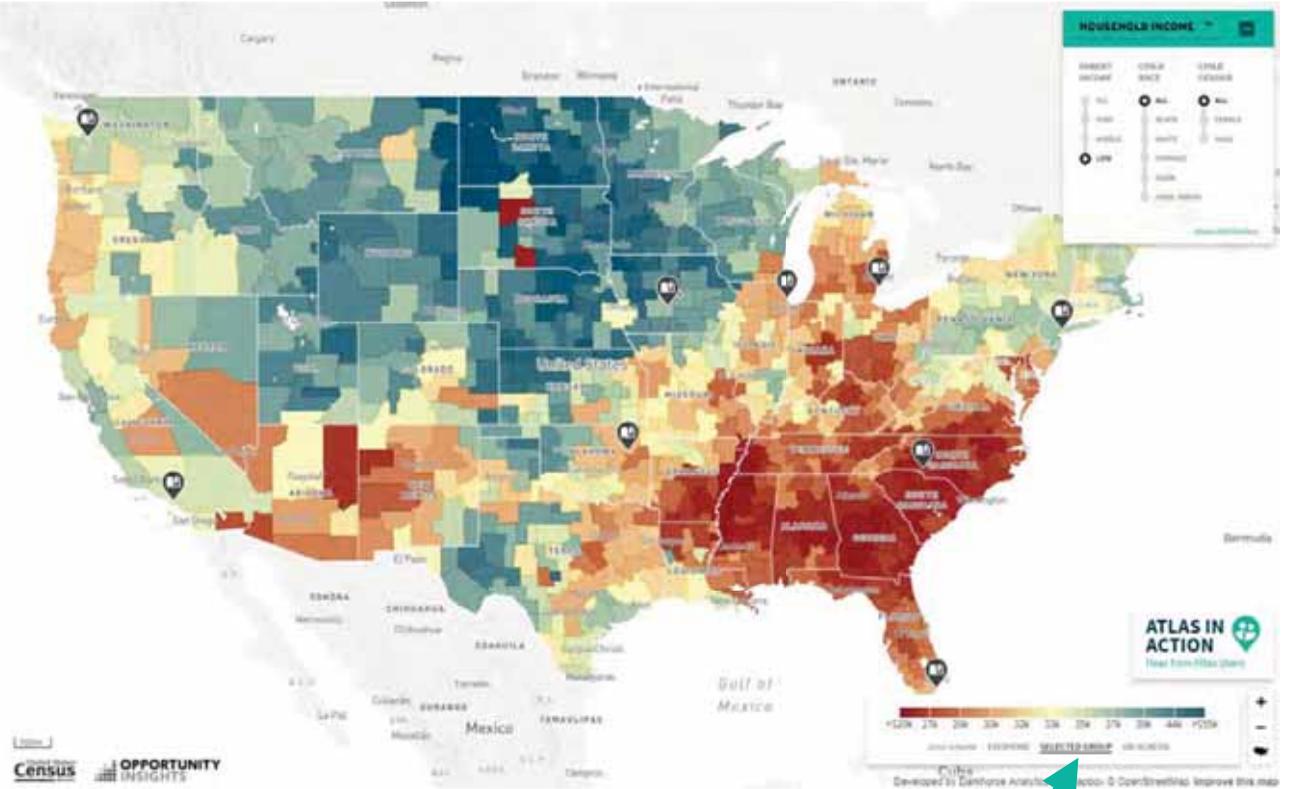

"Subgroup" scaling refers to the "Selected Group" scaling on the Atlas, which scales the colors to compare the outcomes of the selected subgroup **to others in the same subgroup**, (e.g., comparing low-income children to all other low-income children nationally).

OPPORTUNITY INSIGHTS

Opportunity Insights' Data Sources:

- Federal Income Tax Returns for **1989**, **1994**, **1995**, and **1995-2015**
- Decennial Census Short Form for **2000** and **2010**
- Decennial Census Long Form for **2000**
- American Community Survey for **2005-2015**

- These data have all been combined into our tool called the Opportunity Atlas

Outcome Methodology:

- "Adult Household Income" refers to the current average income (in $) of children raised in low-income families, who are now adults. This adult income is estimated in 2013-2018 for the cohort of low-income American children who were born in 1978-1983. The percentile rankings we report throughout this presentation are calculated across whichever selection is made within the Opportunity Atlas. Selection options include:
    - All low-income children nationally
    - Low-income children of a specific race
    - Low-income children of a specific gender

- Note: The Opportunity Atlas does allow us to look at the outcomes of children raised in middle- and high-income families, but here we focus of low-income children in order to measure upward mobility.

OPPORTUNITY INSIGHTS

How Our Data Reflect Current Conditions

- On average, the long-run mobility outcomes for people born around 1980 are **strong predictors** of medium-run mobility outcomes for people born around 1990.

- Outcomes from the 1980 group are **better predictors** for the more recent generation's trends than other observable tract characteristics like the poverty rate or unemployment rate.

- Though gentrifying neighborhoods will see changes in current characteristics (higher rents, higher household incomes, etc.), the **outcomes of original residents will not necessarily improve.**

- Places that produce good outcomes tend to **continue to do so a decade later**.

- Our opportunity measure is a much better predictor of outcomes than poverty rates or tests scores.

- Our data should be combined with **additional analyses** and **on-the-ground knowledge** in areas that have changed substantially

OPPORTUNITY INSIGHTS

Parent Incomes and Student Outcomes
## Measuring the Economic Mobility of Colleges

Use attendance and income data on all college students from 1999-2013 from Treasury and Dept. of Education

- **Parents:** Measure household incomes when students are teenagers

- **Students:** Measure earnings in the mid-30s for <u>enrolled</u> students

Rank students and parents relative to others in the same cohort
